

Sub-floor minibox for apparatus wires

(Art.904A)

Sub-floor Minibox for apparatus cables for cable collection with sub-floor installation for fencing

- It is appropriate to place the subfloor mini-box in the center and between two pistes so it could be of use for both recording machines. If the cables which go out of the minibox and go to the apparatus have a length from 1.5 to 2.5 meters, when they are not used, they can be put back in the minibox avoiding to take them away. In this way, the minibox becomes more functional and the connectors inside it are not necessary. So the costs are decreased and connections reliability is increased.
- Sturdy cover made out in grey PVC.
- Total dimensions: 20 x 20 x 20cm. Total weight 1.2kg.
